

4-in-1 Gherkin Checker & Validator Suite

Comprehensive User Manual & Technical Integration Guide

React 19

Vite 8

Vercel Ready

GitHub Integrated

1. Integrated Gherkin Checkers & Repositories

The suite processes every pasted or uploaded Gherkin file through 4 specialized checkers simultaneously:

1. gherkin-lint

github.com/gherkin-lint/gherkin-lint

Code quality linter enforcing indentation, duplicate scenario titles, missing descriptions, repeated keywords, and logical step order.

2. @cucumber/gherkin

github.com/cucumber/gherkin-javascript

Official Cucumber AST Parser validating token hierarchy, syntax correctness, tag syntax, tables, and document structure.

3. Matriz88/gherkin-checker

github.com/Matriz88/gherkin-checker

Consistency matcher validating dangling steps (And/But), unclosed quote literals, and verifying Scenario Outline <param> placeholders exist in Examples headers.

4. sistar/gherkin-validator

github.com/sistar/gherkin-validator

Lexical token scanner verifying table pipe alignments (|), column count mismatches across rows, and DocString block fencing (""").

2. How to Use the Application

Step 1: Input Your Gherkin Feature Code

- **Paste Directly:** Type or paste Gherkin text into the Gherkin Feature Editor.
- **Upload File:** Click `Upload File` to select a `.feature` or `.txt` file.
- **1-Click Presets:** Test using 4 built-in preset test cases:
 - `Valid Feature` : Clean feature passing all 4 checkers.
 - `Syntax & Lexing Errors` : Demonstrates syntax and token failures.
 - `Lint Rule Violations` : Demonstrates duplicate scenario names & formatting warnings.
 - `Inconsistent Steps` : Demonstrates dangling steps & missing outline parameters.

Step 2: Real-Time Instant Analysis

The application runs all 4 checkers concurrently on every keystroke. Results update in **< 5 milliseconds** without requiring a manual submit button.

Step 3: Export Summary Reports

Export full analysis reports via the `Download JSON Report` or `Download Markdown Report` buttons.

3. How to Interpret Validations & Errors

Overall Pass / Fail Banner

PASS Displayed when 0 errors are found across all 4 checkers. Celebratory confetti triggers automatically.

FAIL Displayed when 1 or more errors are detected, showing total issue counts.

Detailed Failure Breakdown

Field	Description	Example Output
Line Number	Exact line number in your <code>.feature</code> file	Line 14
Category & Rule	Categorized error badge & rule name	[AST Syntax Error] / rule: parse-error
Failing Snippet	Exact code text on that failing line	Laptop 1000
Failure Reason	Plain-English explanation of why it failed	Table row must end with a pipe character " ".
Suggested Fix	Step-by-step guidance on how to resolve it	Add a trailing pipe " " to close the table cell row on this line.

Editor Line Markers

- Red circle markers highlight lines with critical errors.
- Yellow warning triangles highlight quality warnings.
- Clicking any error item in the dashboard scrolls and highlights the line in the editor.

4. Repository & Vercel Deployment

GitHub Repository: <https://github.com/Sekhar03/gherkin-checker.git> Deploy to Vercel: Connect repository on vercel.com/new and click Deploy.
